EXACT SHARPNESS

Electropolish Technology is a non-grinding sharpening process begins by obtaining a high quality stainless steel that is hardened and tempered to a uniform tensile strength and toughness. This process produces a structure that can be finished to ensure a consistently sharp, precise cutting edge.

EXACT CONSISTENCY

Electropolish Technology virtually assures that last blade is as sharp and dimensionally precise as the first. The process to form the various configurations utilizes high purity carbon tools that produce a constant product dimension. These precision tools are relatively wear-free compared to the continued variations experienced in using traditional grinding manufacturing methods. Electropolish Technology's automated manufacturing minimizes operator handling to produce unparalleled consistency.
